

# What to change — Master of Information Systems

A prioritised, evidence-linked redesign that moves MC-IS from **HIGH RISK to RESILIENT in 24 months** — derived directly from its durability score and the labour-market signals behind each gap. University of Melbourne · assessed May 2026.

## THE DIAGNOSIS

18<sub>/36</sub>

HIGH RISK

The program is **not broken** — it is structurally uneven. Breadth is adequate across systems thinking, domain grounding and human capability, but three dimensions that most directly determine 2027 labour-market durability score **1/3**. The redesign task is narrow and specific: close these three gaps, then convert "adequate" to "strong".

D5 · AI LITERACY  
No core AI-governance unit  
1/3

D1 · AUTOMATION  
BA/PM spine is AI-substitutable  
1/3

D10 · OUTCOMES  
No role-level destination data  
1/3

## THE 24-MONTH TRAJECTORY

## PRIORITY MOVES — SEQUENCED BY IMPACT, EFFORT AND ACCREDITATION LEVERAGE

| INTERVENTION                                                                                                                                  | TARGETS  | IMPACT | EFFORT | WHEN              |
|-----------------------------------------------------------------------------------------------------------------------------------------------|----------|--------|--------|-------------------|
| 1 Create a mandatory core unit — AI Governance & Deployment (NIST AI RMF, ISO 42001, human-in-the-loop design, vendor assessment).            | D5 D1 ↗  | High   | High   | Sem 1 2027        |
| 2 Mandate a real-client AI-implementation capstone for all tracks — defended trade-offs on a live brief.                                      | D4 D1 ↗  | High   | High   | Months 4–12       |
| 3 Redesign the Systems Analysis & Design assessment — replace the requirements document with an automation audit + governance recommendation. | D2 D4 D1 | High   | Medium | Months 2–6        |
| 4 Add a data-engineering elective pathway (SQL, Python, dbt) — build the data product, not just consume the report.                           | D3 ↗     | High   | Medium | Sem 2 2027        |
| 5 Introduce a sector-specialisation cluster (health IT, fintech, or govtech) to deepen domain value.                                          | D6 ↗     | High   | Medium | Months 6–12       |
| 6 Stand up granular graduate-destination tracking — role titles & salary, published at cohort level.                                          | D10      | Med    | Medium | First report 2027 |
| 7 Convene an employer advisory panel with an annual curriculum-signal review.                                                                 | D9 D10   | Med    | Medium | Panel by Mo 6     |
| 8 Re-frame careers & marketing toward AI-workflow architect / automation-governance analyst.                                                  | D1       | Med    | Low    | Months 1–3        |

**How this was produced.** COMPASS scored the MC-IS curriculum on ten durability dimensions plus an Irreplaceability premium, mapped each gap to current ANZ hiring signals (e.g. Automation Analyst postings +47% YoY; AI-Governance Analyst an emerging title; BA/PM entry roles down 14–22%), and sequenced interventions by impact × effort × accreditation leverage. Targets: D1 Automation · D2 Systems · D3 Technical · D4 Decisions · D5 AI Literacy · D6 Domain · D9 Currency · D10 Outcomes · ↗ Irreplaceability. Illustrative artefact for discussion — not a faculty directive.
